

MANAGING REMOTE CLIENTS

Abstract of the Disclosure

A messaging system may enable a server to assign unique identifiers to a plurality of clients. These 5 identifiers enable a client to determine whether a message is specifically targeted to that client or, as an alternative, whether the client is a member of a group of targeted clients. A server may send messages containing an identifier to agents on one or more clients. The 10 identifier may specify commands to manage the uploading of information from one or more clients to a server.

DISCLOSED AT DUE DILIGENCE
